

# ART CLAY™ SILVER Basic Instruction Guide #040

## UV Resin Bottle Pendant

Level: Basic/ Intermediate

Completed piece

You can set anything you want in the acrylic UV resin and make memorabilia. We use as an example our staff's pendant using her son's first hair.

### <Materials>

|                                     |      |
|-------------------------------------|------|
| Art Clay Silver 650/1200 Clay Type  | 20g  |
| Art Clay Silver 650/1200 Paste Type | some |
| Acrylic UV resin                    | some |
| Any stones                          | some |
| Pressed flower (optional)           | 1pc  |
| Lock of baby hair (optional)        |      |

### <Step by Step Guide>

- 1) Place a pair of 2.5mm plastic strips on each side and roll out clay 2.5mm thick with a mini roller. Cut out into square shapes 1.3 x 1.3cm 2pcs and 1.3 x 1.8cm 2pcs. Then, dry with a hot hair dryer.

- 4) Make a triangular shape for the top 8mm thick at its widest point and 8mm tall, dry, drill a hole with  $\phi$  3 drill bit (see image), and file tip flat.

- 7) Make a mirror finish by polishing the piece with a stainless steel brush and sandpaper (#600, 1200 and 2000 in order). Burnish with a silver cloth and some silver polish.

- 2) Make a square shape with 4pcs and some Paste Type. Dry completely.

- 5) Attach the bail on the piece with some Paste Type, then dry.

- 8) Attach tape on the back. Pour some acrylic UV resin up to 2mm deep. Cure it in a UV light box for approx. 2 mins.

- 3) Place a piece of sandpaper underneath (#600), and file the outer edges till smooth.

- 6) Fire at 800C for 5 mins in a kiln. Or place a stainless steel net on a gas stove. On the hot glowing area, place the piece, cover with the protection net and fire for over 5 mins.

- 9) Repeat, pouring in some acrylic UV resin up to 2mm thick again, putting in stones and your baby's hair etc, and curing in the box for 2 mins. Add some acrylic UV resin so as to mound the front surface, then cure in the box for 2 mins.

10) Smooth the UV surface with moistened sandpaper. Polish with a silver cloth and some silver polish, and finish.

**TIP1:** Acrylic UV resin itself cures faster than UV resin with UV color. Darker colors take more time to cure.

**TIP2:** You can set synthetic stones, line stones, artificial flowers, glass frits, beads etc. Transparent material makes your internal design stand out.

**TIP3:** Place the lock of hair with a toothpick when you set hair.
